Input

Output

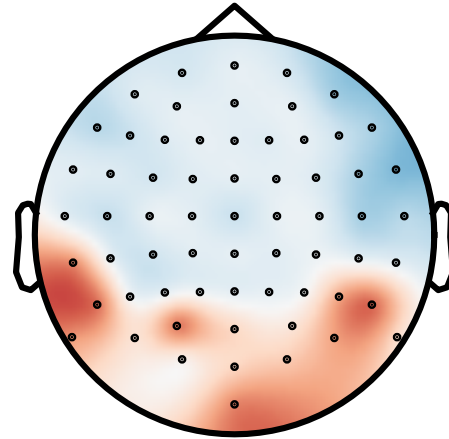

'cat'

DNN Activations are not Visually Interpretable

... ?

Visualizing Brain Activity

Visualizing DNN Activations

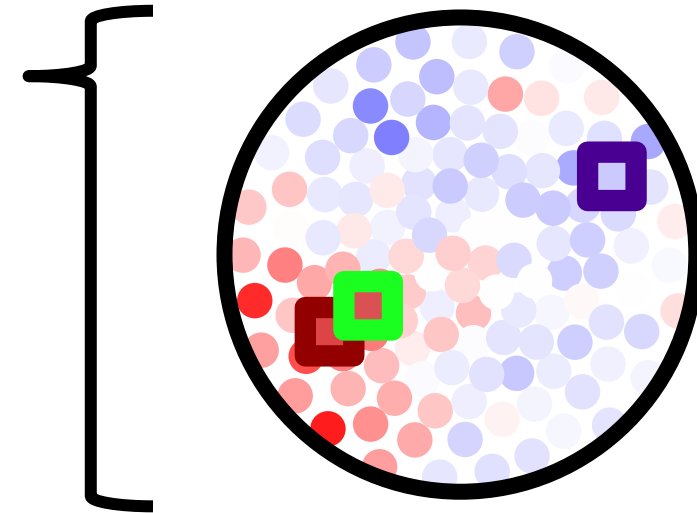

Topographic Activation Maps

high activation similarity across groups
→ small distance in layout

low activation similarity across groups
→ high distance in layout

laid out neurons
colored by activation
values for group '7'

Topographic Activation Maps

high activation similarity across groups
→ small distance in layout

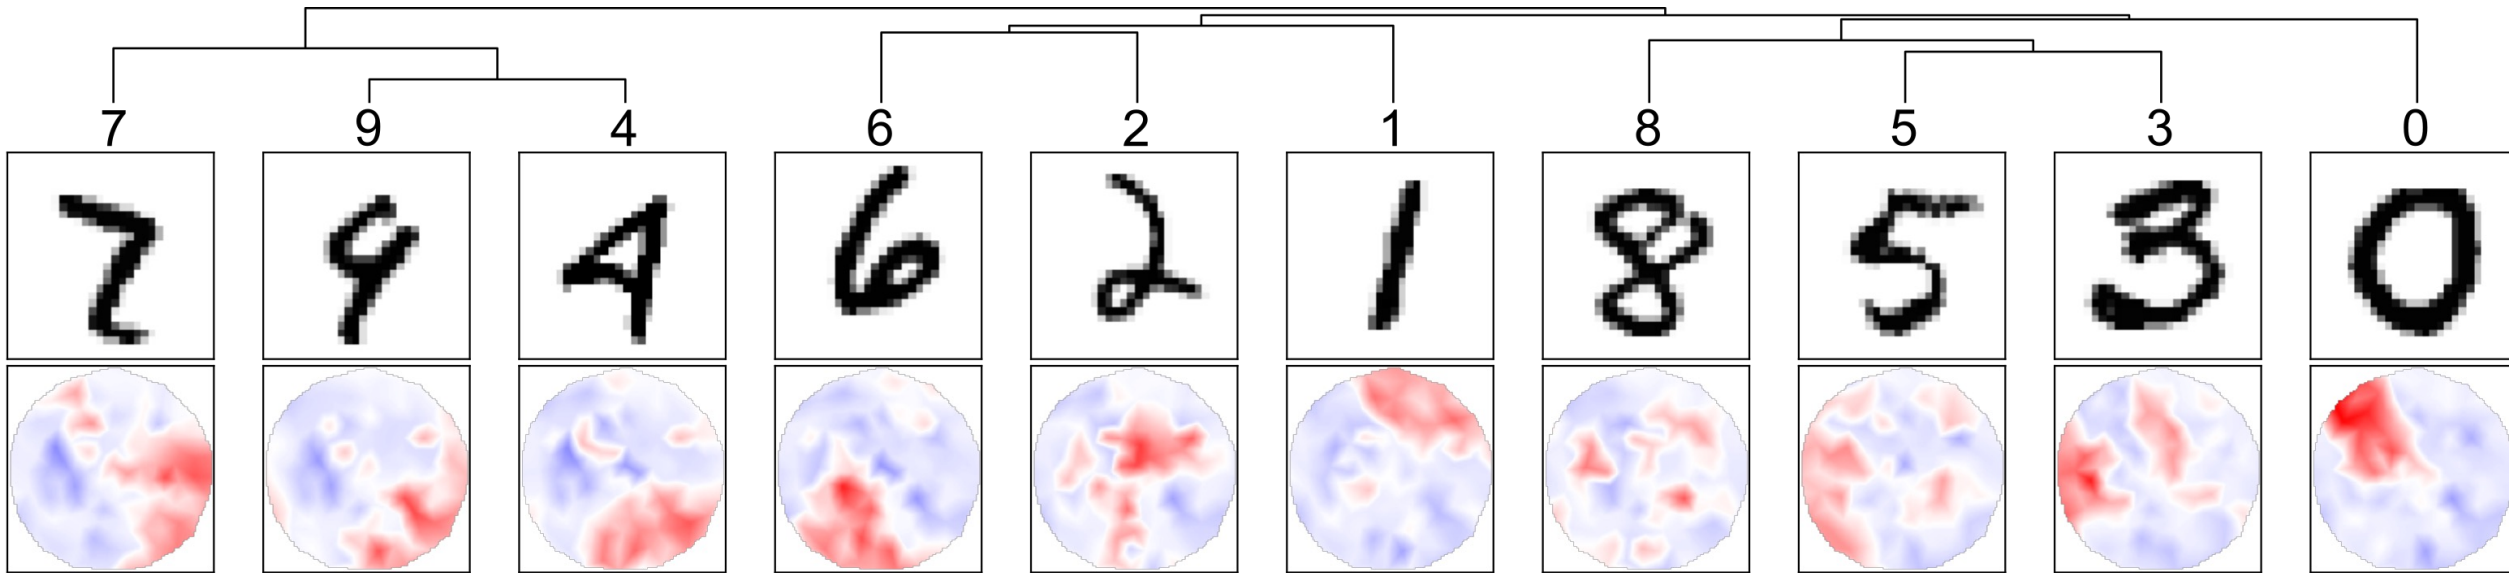

low activation similarity across groups
→ high distance in layout

laid out neurons
colored by activation
values for group '7'

Comparing Groups with Topographic Maps

same layout, different activity per group

Krug et al. (2023). Visualizing Deep Neural Networks with Topographic Activation Maps. In HHA1 2023: Augmenting Human Intellect, pages 138–152. IOS Press.

Uncertainty

meets

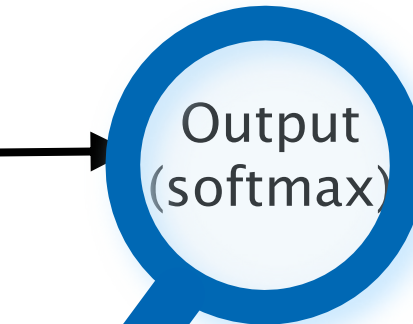

Explainability

Input

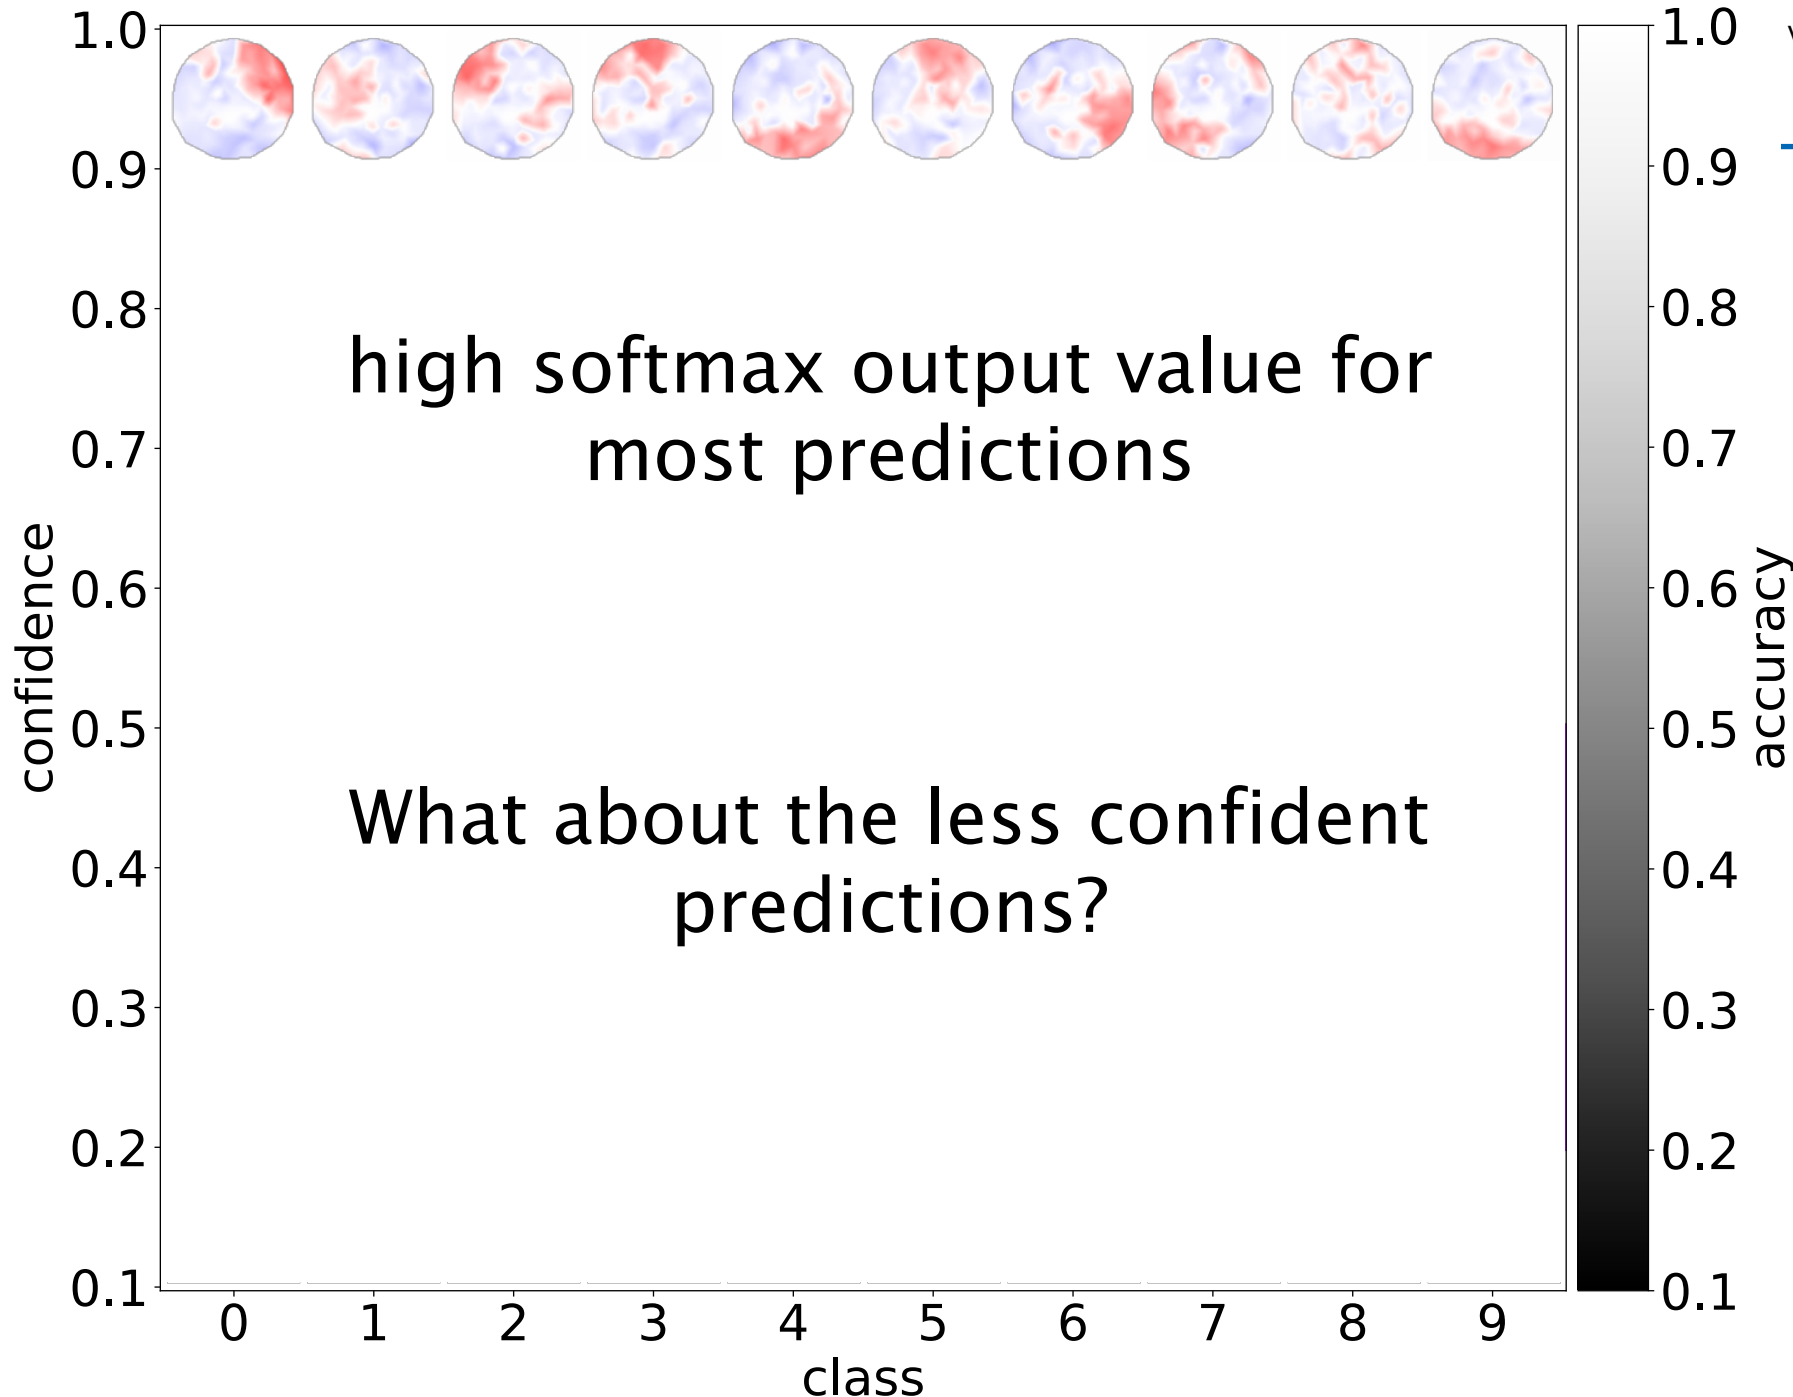

DNN
blackbox

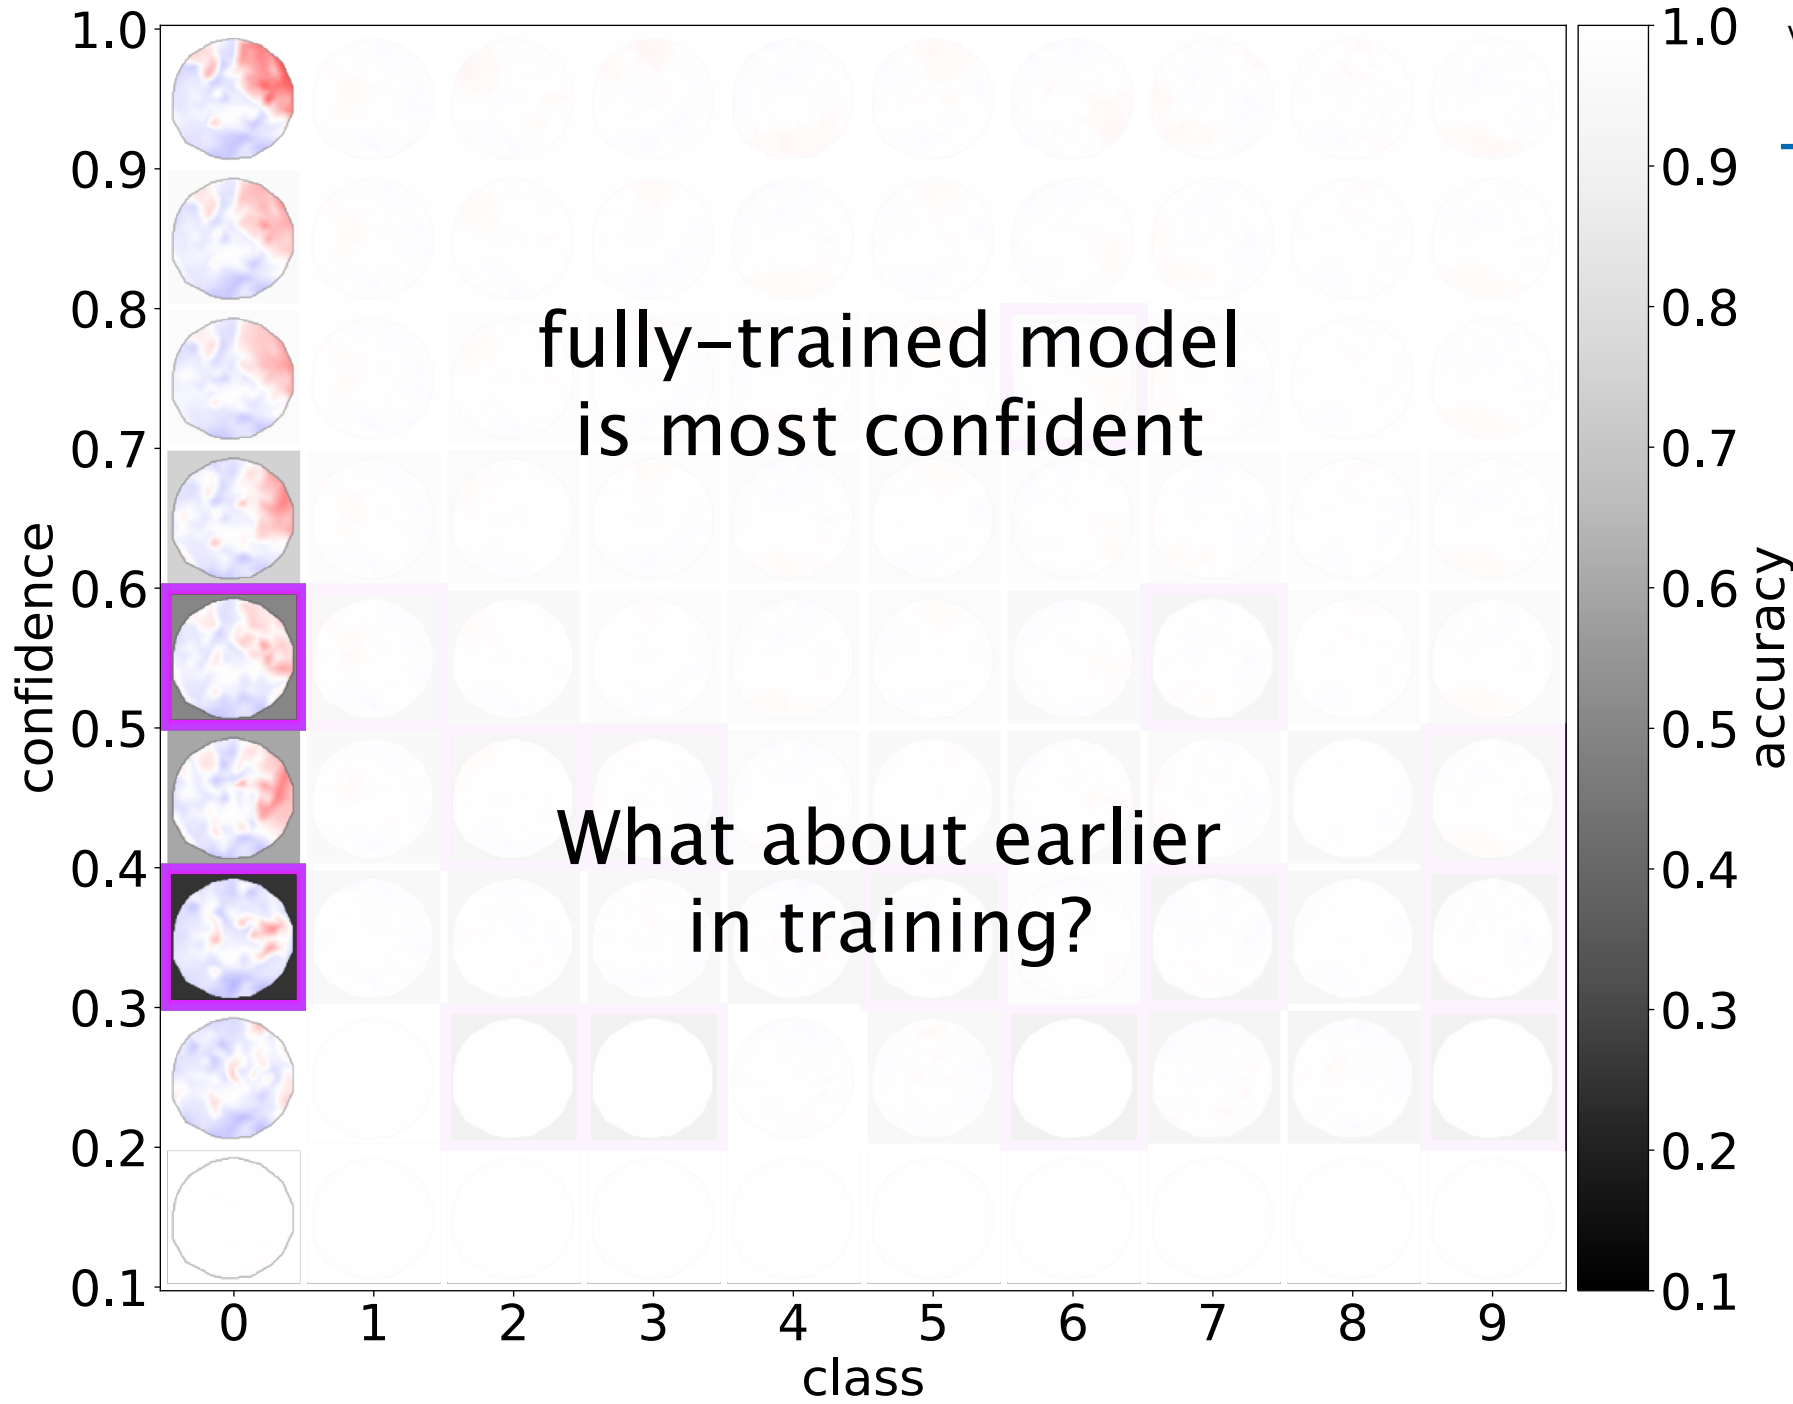

Output
(softmax)

'cat'

?

Future work

Investigate:

- more complex models
- longer training times (with potential overfitting)
- more sophisticated confidence measures
